

Areas with No Reported Residential Broadband (Information as of December 31, 2008)

 Areas with No Reported Broadband

Information as reported by providers to the Illinois Commerce Commission. Providers reported, at their discretion, by zip code, exchange, or census tract.

NOTE: Residential areas with service include zip codes, census tracts, or exchanges where one or more providers reported offering services with speeds of 200 kbps or greater in some part of the area. Because providers reported an area as served if service was offered in any part of the area there will be areas that are unserved that are not depicted as unserved on this map. Furthermore, the map will not capture areas that are underserved, for example, as a result of overly slow product speeds or prohibitively expensive prices. Alternatively, services provided by non-reporting providers, such as satellite service, are offered in some or all areas depicted as unserved.

Questions regarding this map should be directed to: Jim Zolnierak at the Illinois Commerce Commission (217-524-5073).
